SERVICES CATALOG

Summer 2020

Directory

Dedication

FOR OUR PARTNERS,

without whom our mission to Defend Today, Secure Tomorrow would be impossible.

This catalog, the first of its kind and the first of many to come, is both a resource and an invitation. As you explore the range of Cybersecurity and Infrastructure Security Agency (CISA) services featured throughout the pages that follow, we encourage you to think of each as an opportunity to partner with us.

CISA leads the nation's risk management efforts by mobilizing a collective defense of our nation's critical infrastructure. We do this by bringing together diverse stakeholders and giving them a seat at the table to collaboratively identify risks, prioritize them, develop solutions, and drive the wide adoption of those solutions to ensure the stability of our national critical functions. We are, in other words, the "front door" to the government on issues related to cybersecurity and critical infrastructure protection.

So, whether you are seeking assistance to address a specific issue, gaining access to information and analysis, or looking to collaborate with us and other partners, with this catalog we are opening that door. We look forward to your continued partnership in national resilience.

– CISA

Introduction

SERVICES TO HELP YOU DEFEND TODAY AND SECURE TOMORROW, ALL IN ONE PLACE

ABOUT CISA SERVICES

CISA provides a variety of risk management and response services to build stakeholder resiliency and form partnerships. The purpose of the CISA Services Catalog is to inform our stakeholders of available services, encourage information sharing within the community and promote the protection of physical and digital systems.

The services we provide are driven by a comprehensive understanding of the risk environment and the corresponding needs identified by our stakeholders. CISA seeks to help organizations of all types better understand and increase resilience using all available resources, whether provided by the federal government, commercial vendors, or small businesses.

Many of the services described in this catalog involve the close coordination and sharing of sensitive information between CISA and the organization receiving the service. To facilitate these partnerships, such organizations receive protections under the Protected Critical Infrastructure Information (PCII) Program, which ensures that CISA will not expose sensitive or

proprietary data shared by partners during the course of receiving a CISA service. For more information on the PCII Program, visit <https://www.cisa.gov/pcii-program>.

ABOUT THIS CATALOG

CISA has designed this catalog to give readers an overview of the comprehensive ecosystem of support available to CISA stakeholders. This includes CISA field staff who provide personalized support to stakeholders across the country, as well as a network of sector-specific councils and collaborative forums.

The centerpiece of this catalog is the Interactive Services Portal, which for the first time provides CISA stakeholders with

a single point of reference for accessing information on CISA's vast collection of services. This is made possible through interactive elements that allow readers to filter service selections through stakeholder type, service category, focus area, and their own level of readiness to view resources specific to their individual needs and capabilities.

For general questions about CISA services or for support with this catalog, please contact your local CISA field staff as outlined on the [Working With CISA](#) page of this catalog or email Central@cisa.gov.

GETTING THE MOST OUT OF THIS CATALOG

Users are encouraged to ask themselves the following questions before exploring the Interactive Services Portal section:

- Where am I most at risk?
- What are my vulnerabilities that can be exacerbated by those risks?
- What are current capabilities I can leverage against those risks and vulnerabilities?
- What can I start doing today?
- Who can I call for support?

CISA Interactive Services Portal

HOW TO USE THE INTERACTIVE SERVICES PORTAL

This catalog lets users personalize the CISA services they see on the page by using filters that allow them to hone in on those that are most applicable to the unique needs of their individual organizations.

This page provides an introduction to the filter buttons users will encounter in this section and provides definitions to each to assist users as they explore CISA services.

SERVICE TYPE BUTTONS

The service catalog breaks up its service listing into the four categories of CISA's principal mission areas.

Cybersecurity: protecting networks, devices, and data from unauthorized access or criminal use and the practice of ensuring confidentiality, integrity, and availability of information.

Infrastructure Security: the security provided to critical infrastructure across the nation achieved through sound risk management, collaboration, information sharing, innovation, effective program management, and a highly skilled workforce. This term also applies to the physical security of other soft targets such as public spaces and the workplace.

Emergency Communications: support of public safety interoperable communications for preparedness, response, and coordination at all levels of government in the event of natural disasters, acts of terrorism, and other hazards.

Risk Management: the process of identifying, analyzing, and communicating risk and accepting, avoiding, transferring, or controlling it to an acceptable level considering associated costs and benefits of any actions taken.

SERVICE FOCUS AREA TERMS

CISA's services are then further broken down by "focus area" or the type of activity the service performs.

Capacity Building: efforts aimed at developing capabilities or human skills within a community or organization to reduce the level of risk or the effects of an incident negatively impacting physical and/or cyber infrastructure.

Emergency Communications: communications used by all federal, state, local, tribal, territorial and industry partners, emergency responders and government officials for coordination of emergency response planning and support.

Incident Management and Response: the process by which all levels of government, nongovernmental organizations (NGOs), and the private sector work together to prevent, protect against, mitigate, respond to, and recover from incidents.

Information and Data Sharing: The exchange of data between various organizations, people and technologies to improve resilience of stakeholder owned and operated critical infrastructure.

Partnership Development: increasing collaboration between all levels of public and private sector partners to improve resilience, awareness, and support of stakeholders.

Risk Assessment and Analysis: the process of identifying risks to organizational operations, assets, and individuals; and the process to comprehend the nature and severity of the risk and act accordingly.

READINESS LEVEL TERMS

The CISA Services Catalog will then allow users to view individual services based off of the level of readiness and capability required for the user's organization to have the service administered as designed and receive the full benefits as intended.

Foundational: services and resources that are available and recommended to all users regardless of capability.

Intermediate: services that require users to have some experience developing and implementing security policies and procedures either on their own or through previous CISA engagements.

Advanced: services that, because of their expansive scope and technical complexity, require pre-existing capabilities and programs already in place within an organization that can be leveraged as prerequisites for receiving that service.

Working With CISA

A GUIDE TO CISA CENTRAL, CISA FIELD STAFF AND CISA REGIONS

CISA CENTRAL

CISA Central is CISA's hub for staying on top of threats and emerging risks to our nation's critical infrastructure, whether they're of cyber, communications or physical origin. CISA Central is the simplest, most centralized way for critical infrastructure partners and stakeholders to engage with CISA and is the easiest way for all critical infrastructure stakeholders to request assistance and get the information you need to understand the constantly evolving risk landscape.

Through CISA Central, CISA coordinates situational awareness and response to national cyber, communications, and physical incidents. CISA works closely with public, private sector, and international partners, offering technical assistance, information security and education to protect our nation's critical infrastructure from a broad range of current cyber, communication, and physical threats.

For more information, email Central@cisa.gov. To report an incident, visit <https://www.us-cert.gov/report>.

PERSONALIZED SUPPORT

Many of the services CISA offers are provided through the CISA Regions. Regional personnel work with critical infrastructure partners and communities at the regional, state, tribal, and local levels to:

- Support preparation, response and recovery efforts for hazards impacting critical infrastructure
- Safeguard soft targets and crowded places
- Conduct and integrate infrastructure assessments and analysis, including dependencies and cascading effects on critical infrastructure to influence decision-making at all phases of emergency management
- Facilitate information sharing between public and private sector critical infrastructure partners
- Enhance election infrastructure security and critical infrastructure cyber systems
- Improve situational awareness of cybersecurity risks and incidents.

Within each CISA Region are local and regional Protective Security Advisors (PSAs), Cybersecurity Advisors (CSAs), Emergency Communications Coordinators, and other CISA personnel. These field personnel advise and assist in training and exercising some of the best practices to support our partners in achieving more robust resilience.

PSAs are trained subject matter experts in critical infrastructure protection and vulnerability mitigation. They facilitate local field activities in coordination with other Department of Homeland Security offices. They also advise and assist state, local, and private sector officials and critical infrastructure facility owners and operators.

CSAs offer cybersecurity assistance to critical infrastructure owners and operators and SLTT governments. CSAs introduce organizations to various CISA cybersecurity products, services, and other resources, and act as liaisons to CISA cyber programs. CSAs can provide cyber preparedness, assessments and protective resources, strategic messaging, working group support, partnership development, and coordination and support during cyber incidents.

Emergency Communications Coordinators support emergency communications interoperability by offering training, tools, workshops, and regional support. These services assist CISA stakeholders in ensuring they have communications during steady and emergency operations. Through these programs, CISA helps ensure public safety and national security and emergency preparedness communities can seamlessly and securely communicate.

Chemical Security Inspectors (CSIs) advise facilities with hazardous chemicals on security measures to reduce the risk of those chemicals being weaponized. For facilities covered under the Chemical Security Anti-Terrorism Standards (CFATS) program, this includes working with the highest-risk facilities to develop security plans and conducting security inspections.

CISA's field staff operate out of each of CISA's ten regions. Each region supports a specific portfolio of states. Please refer to the following listing for locations served by each region and contact information, or visit <https://www.cisa.gov/cisa-regions>.

Sector Management Services

SECURING THE NATION THROUGH COLLABORATION

SECTOR-SPECIFIC AGENCY (SSA) MANAGEMENT SERVICES

The nation's critical infrastructure provides essential services that serve as the backbone of our economy, security, and well-being. There are 16 critical infrastructure sectors whose assets, systems, and networks are so vital to the United States that their incapacitation or destruction would have a debilitating effect on national security, economic security, public health, or safety. For each one of these sectors, an executive agency serves as the SSA. CISA serves as the lead for eight sectors and one sub-sector.

The benefits and services associated with CISA's role as the SSA for the assigned sectors include:

- Focal point for collaboration among critical infrastructure owners and operators, other federal departments and agencies, and SLTT entities on sector-specific issues pertaining to cybersecurity and infrastructure security
- Coordination hub for prioritization and coordination of sector-specific activities,

including those related to education, training, information sharing, and outreach

- Incident management responsibilities in accordance to the appropriate policies and directives
- Facilitation of technical assistance and consultations to support risk management efforts across the sector.

SECTOR COORDINATING COUNCILS (SCCs)

For each sector, [SCCs](#) facilitate collaboration between the Federal Government and its partners in matters of infrastructure security and resilience activities. These councils serve as forums for critical infrastructure owners and operators, their trade associations, and other industry representatives to engage with one another and the Federal Government on developing a range of sector-specific strategies, policies, and activities.

In many cases, SCCs provide additional benefits and services to their membership, which may include facilitating coordination

between sector partners and the government during emerging threats or response and recovery operations; information-sharing forums, including quarterly sector meetings, classified briefings, and data sharing platforms; coordination of the sector's policy development on a range of issues and requirements; dissemination of sector-specific cybersecurity best practices; and identification and prioritization of risk management challenges and requirements.

GOVERNMENT COORDINATING COUNCILS (GCCs)

[GCCs](#) serve as the government counterpart to SCCs and facilitate interagency and cross-jurisdictional coordination on critical infrastructure strategy, activities, policy, and communications. They are comprised of representatives from various levels of government (federal, state, local, tribal and territorial) as appropriate to the operating landscape of each sector. GCCs coordinate with corresponding SCCs to implement the [nation's critical infrastructure security and resilience mission](#).

COLLABORATIVE FORUMS

The Critical Infrastructure Partnership Advisory Council (CIPAC) is an advisory council managed by CISA to directly support the implementation of the [National Infrastructure Protection Plan \(NIPP\)](#).

Using the [sector partnership structure](#), CIPAC provides a forum that enables members of the recognized SCCs, GCCs, and [cross-sector councils](#) to discuss joint critical infrastructure planning, coordination, implementation, and operational issues, along with other relevant matters. CIPAC provides the framework through which members deliberate to achieve consensus on policy, advice, and recommendations to be presented to CISA and other federal departments and agencies supporting the cybersecurity and infrastructure security mission.

Cross-sector issues and interdependencies are addressed among the SCCs through the [Critical Infrastructure Cross-Sector Council](#), which comprises the leadership of each of the SCCs.

Sector Management Services

SECURING THE NATION THROUGH COLLABORATION

Enhanced communication and coordination among federal departments and agencies that have a role in the cybersecurity and infrastructure security mission is achieved through the [Federal Senior Leadership Council](#), which includes SSA senior representatives for each of the critical infrastructure sectors.

The [SLTT GCC](#) serves as a forum to ensure that state, local, tribal and territorial homeland security partners are fully integrated as active participants in national-level cybersecurity and infrastructure security efforts, and to provide an organizational structure to coordinate across jurisdictions on associated guidance, strategies, and programs.

The [Regional Consortium Coordinating Council](#) brings together representatives of regional partnerships, groupings, and governance bodies to enable critical infrastructure security and resilience coordination among partners within and across geographical areas and sectors.

Additional information on CIPAC and related resources can be found at <https://www.cisa.gov/critical-infrastructure-partnership-advisory-council>.

INFORMATION SHARING AND ANALYSIS CENTERS (ISACs)

ISACs are sector-specific, non-profit, member-driven organizations comprised of critical infrastructure owners and operators that work in close coordination with CISA to share information between government and private industry. There are multiple ISACs, each supporting a specific critical infrastructure sector. Some examples include the Communications ISAC, Aviation ISAC, and Financial Services ISAC.

INFORMATION SHARING AND ANALYSIS ORGANIZATIONS (ISAOs)

ISAOs are similar to ISACs in that they facilitate the sharing of critical cybersecurity information between the public and private sectors and the Federal Government. However, unlike ISACs, ISAOs are not sector-specific and can be organized around other affinities, such as sub-sectors, regions, or around particular emerging threats and vulnerabilities.

PRESIDENTIALLY APPOINTED FORUMS

CISA manages two presidential advisory committees, the National Infrastructure Advisory Council and the National Security Telecommunications Advisory Committee. These forums are composed of presidentially-appointed senior executives representing industry, state and local governments, critical infrastructure owners, and others. At the President's request, these forums study national security policy concerns related to physical and cyber risks.

While membership in these forums is determined by the President, their output not only benefits the Administration but can benefit the entire Executive Branch—to include CISA. This output is provided in the form of a report with findings, actionable and timely recommendations for addressing current cyber and physical infrastructure risks, government policy, as well as national security and emergency preparedness programs.

CISA, and other federal agencies, leverage these recommendations to enhance their own programs, initiatives and services. Non-federal entities are encouraged to internalize recommendations where appropriate when setting their own priorities.

The President's National Infrastructure Advisory Council (NIAC)

The NIAC advises the President on practical strategies for industry and government to reduce complex risks to critical infrastructure. At the president's direction, the council studies physical and cyber risks, and recommends solutions to reduce risks and improve security and resilience. To learn more, visit <https://www.cisa.gov/niac>.

The President's National Security Telecommunications Advisory Committee (NSTAC)

The NSTAC provides industry-based analyses and recommendations to the President and the Executive Branch for policy and enhancements to national security and emergency preparedness telecommunications. The committee advises the president on a range of policy and technical issues related to telecommunications, information systems, information assurance, infrastructure protection. To learn more, visit <https://www.cisa.gov/about-nstac>.
